

VENTURI CABINET

The Venturi system uses less power than pressure systems and is used mainly for engraving at shallow depths, such as for photographs and on glass. The Venturi cabinet joins a pistol to the cabinet hopper forming a closed and continuous circuit for the abrasive.

The cabinet is very sturdy, which means it can accept large pieces up to 11 cm thick, 100 cm high and of any length, as the two side doors mean the piece can be wider than the cabinet and still placed inside. The two doors are protected by thin nylon strips and doors that prevent the abrasive from escaping. The third door opens up the entire side, allowing much thicker pieces to be inserted. It also features a protected viewing window and a 500w spotlight

VENTURI	
MEASURES	206x100x100 cm
WEIGH	215 kg
1 BLUB	500 w
TURBINE	2 Cv
PLATES	1.5 and 3 mm
