PHOTOPRINT ENGRAVED I-2

PHOTOPRINT is a machine for creating high resolution templates for the subsequent sandblasting of drawings, photographs and great texts quality and detail about a multitude of materials such as marble, granite, stoneware, glass ... Obtaining templates is simple and fast. A scanner is needed for this, a printer, a small sandblast and the Photoprint.

The process to follow is as follows:
1. Scanning the image 2. Preparing the image on the computer using photo retouching program, obtaining the negative 3. Printing of the latter
4. Achievement of the template from the printed negative and the photographic mask in an automatic sunning process. The development is done manually by pressurized water gun and air dried.
5. Paste of the template on the material and engraving.
