

CA-75 AUTOMATIC CABIN

Measures 2,25 x 2,00 x 4,46m.
Nourishment 230 v.
Minimal consumption 2000 l/min.
Maximum height of work 108 cm.
Maximum pressure 8 bar.

The Ca 75 model is a sturdy, hardwearing automatic cabinet designed for engraving large-scale pieces or at depth on marble or granite up to 7 cm thick. The equipment includes a conveyor belt to move the stone on and an engraving arm that moves up and down as programmed. All the movement transmission systems are external, so no piece is exposed to the abrasive, preventing excessive wear and tear so the unit has a longer life. The programming system is very simple, using a touch screen on the front of the cabinet to programme areas, speeds and the number of passes to produce different depths and finishes.
