

## SANDBLASTING CABINET WITH PRESSURE TANK

This is a combined cabinet and pressure tank, which meets the need for a compact and affordable space-saving machine with the same speed and power as larger models. The tank is connected to the cabinet hopper on the underside of the cabinet, doing away with the sandblaster's own suction systems. The cabinet also includes an abrasive decanting chamber and a dust suction system with a self-cleaning filter system that uses blasts of air to suck away the dust so you can see while you work.
