| REMOTE CONTROL  | yes         |
| VACUUM SISTEM   | no          |

The Compac Junior model is a portable sandblasting machine, with double valve system that synchronizes the opening and the closing and the closing of both the air supply, which facilitates work, allowing one sole person to be able to easily manage its operation by accessing the pedal or push button.

The regulator filter that the machine incorporates in its frontal part allows us to regulate the working pressure desired, while the sandblaster valve situated in the lower part regulates the amount of abrasive, this permits the independent metering of the amount of sand and the pressure to obtain an equal and constant blend.
