

EQUIPMENT

V-6

Etching equipment venturi.

The V-6 is a Venturi sandblaster that launches the abrasive into a continuous recycling recipient. It is highly mobile, weighs less than other sandblasters and can work with a cabinet or a brush, which means it can be operated anywhere.

It is used for shallow engraving or engraving glass, which requires less power. The pistol controls the instant start and stop feature. Air is injected into the pistol at a controlled pressure, and this is where the abrasive and the compressed air are mixed, having entered the interior of the pistol by separate and independent lines.

CHARACTERISTICS	
MOTORS	2 de 1.200W
CAPACITY	40 kg
COOLING	By-pass
PRESSURE MAX	10 bars
VOLTAGE	220/240 v
WEIGHT	26 kg
AUTOMATIC CONTROL	
DEPRESSION	2200 mbars
AIR INSPIRATION	340 m ³ /h
NOZZLE	6 mm tungsteno
